ZEDnet

The central ZEDnet software solution is the ideal addition for optimized management of the ZED devices. All programs and their parameters are stored centrally on the server and distributed to the connected devices if necessary. Advantages are, when many identical devices are used with the same measuring programs.

TYPICAL APPLICATIONS

+ If several devices are used in the same place or different places, which should use the same measuring programs, it is often tedious to keep the changes synchronized. By using ZEDnet, a desired change no longer has to be set individually on site for each device, but only via one of the connected devices. The changes are automatically transferred to all other devices that also use this program.
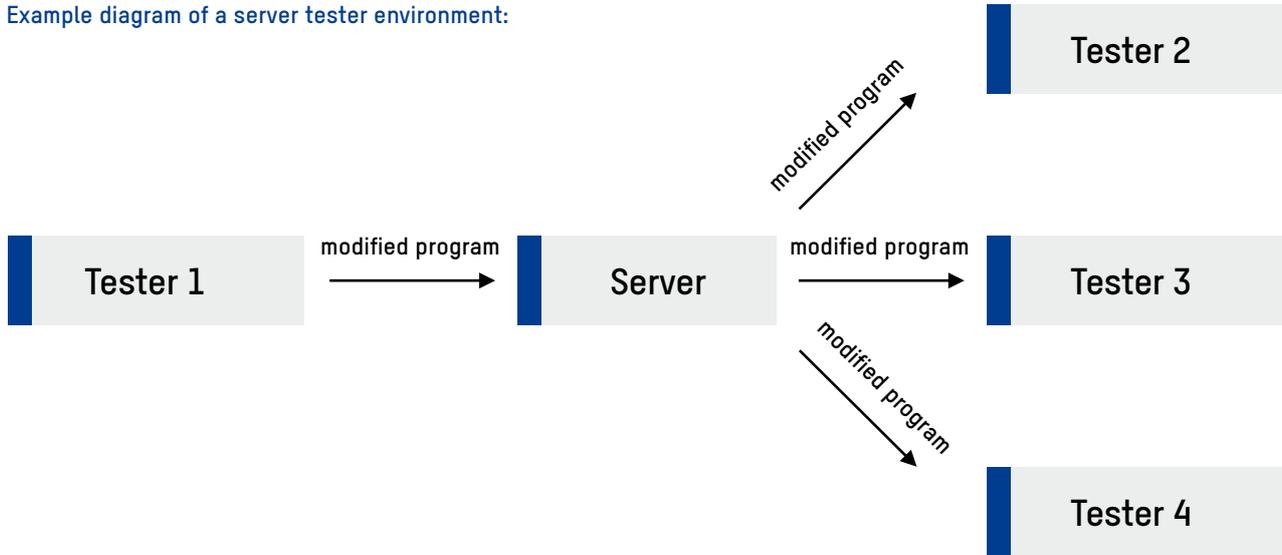

BENEFITS

+ Central parameter management
+ Lowest possible effort for test program change
+ Overview of all connected ZED devices

Example diagram of a server tester environment:

Tester 1 →(modified program)→ Server →(modified program)→ Tester 2

Server →(modified program)→ Tester 3

Server →(modified program)→ Tester 4

Product features:

Automated database backups

Central parameter backup

Precise data integrity

Automatic notification of the ZED devices
in case of parameter change

System requirements (operating system):

Windows 7, 10, Server 2008 or newer (64 bit)

Microsoft.NET Framework 4.5.2 or newer

Microsoft SQL Server 2012 (64 bit)
or newer (Not included in license)

Hardware connection:

Ethernet connection based on TCP/IP
to leak testers

Compatible with the complete ZED device family
